PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience working on cloud-based and enterprise applications. Experience with software development, CI/CD pipelines, containerized deployments, vulnerabilities tracking, bug fixings, automated testing, Jasper reporting, and contributing to software projects across the development lifecycles. Has contributed to improving build reliability, test coverage, and system performance while collaborating with international teams to deliver reliable solutions.

WORK EXPERIENCES

Software Engineer L2, VERINT December 2023 – Present

- Collaborated with UK/US-based product managers to define requirements and present R&D deliverables
- Implemented API endpoints to migrate attachments from Amazon EFS to Amazon S3, supporting 80% features that used attachments
- Developed new component features while enforcing PMD, JaCoCo code coverage, mutation, unit, and Cucumber test standards, resulting in a 95% build success rate in TeamCity releases to Quay and Nexus
- Enhanced backend and frontend functionality for multiple Verint clients, resolving over 100 high/critical bugs
- Deployed components using helm-chart to OpenShift OKD via Harness pipelines resulting in 10+ Verint components accessible on cloud
- Resolved high to low priority vulnerabilities using Black Duck to align with PCI DSS 4.0 compliance, contributing to a successful annual audit
- Created robust unit and automation tests, increasing component's maintainability by 80% and reducing post-release bugs
- Instrumented component metrics into Grafana dashboards for performance monitoring
- Optimized SQL scripts for various operations, improving query performance and overall database efficiency
- Analysed logs in multiple production components for maintainability in Datadog, addressing issue in production level and fix them which increase Verint customer satisfaction

Application Developer, PT. Bank Central Asia Tbk February 2022 – February 2023

- Develop a Customer Relationship Management website with main feature of handling customer requests through Spring Boot framework, Java, and AngularJS
- Develop Excel macro to print data on Excel worksheets through API call for company agent to use
- Develop a knowledge base website through Wordpress
- Deploy applications to Openshift Container Platform
- Develop a website to make calls on internal APIs through react js and node js

SKILLS

- Development: Java, Spring Boot, SQL, Oracle, PostgreSQL, Microsoft SQL Server, Jasper Report, Gradle, Maven, Cucumber, JavaScript, CSS, HTML, CED, npm, Docker, RabbitMQ, AmazonMQ
- Platform: IntelliJ, Visual Studio Code, DBeaver, Quay, DockerHub, HashiCorp Vault, PuTTY, WinSCP, Agent Ransack, OpenLens
- Story & bug tracking: Jira
- CI/CD: Harness, TeamCity, Jenkins, Github Actions
- Vulnerabilities tracking: BlackDuck, Coverity
- Cloud: OpenShift OKD, Kubernetes, AWS, helm-chart
- Version control: GitHub Desktop, Git Bash

EDUCATION

Bachelor's Degree in Computer Science, Bina Nusantara University September 2019 – July 2023

- GPA: 3,76 / 4,00
